Some of the key learning areas in Android

- Understand the Android OS architecture
- Learn how to use the various tools for Android development including device emulator, IDE and profiling tools
- How Android Studio installation works
- Learn how to create and publish your mobile app on the Google Play Store

Harsha began the interaction and emphasised on learning android through offline methods and online video contents. The biggest downfall of most online platforms, especially the free ones, is that they consist of only video content, where students watch a video and dedicate enough to come up with your own projects, work on those projects, actually practice and learn, then it's great. He also told most of us don't try to implement on the application development after investing time in learning through online videos. During the interaction alumni have highlighted the importance of current trends in the industry and guide the students about the career opportunities in different fields. They have also shared their personal experiences with students in learning android studio and importance of developing application on the same platform. Many students volunteered to take up the course and complete there project from there alumini.

Harsha & Linford concluded the session by advice for students – go with what you're interested in. You're not going to dedicate the time to learn something you're not excited about. If you are so excited to learn and willing to put in the time. That's why we have a full-time, immersive course; we expect our students to dedicate the time because they're excited about Android.
